Asters **WILT-RESISTANT** for Greenhouse and Outdoor Growing

ANNUAL 12,000 seeds oz. 68° 2-3 weeks

ASTER GIANT INCURRED MIXED

ASTER PINK LADY

Asters in the Greenhouse

The off-season production of Asters as a greenhouse crop is proving most profitable. While Asters can be flowered all year on a schedule similar to the one used for "Mums," it is as an early Spring and Summer cutflower they are at their best.

Requirements are simple: a night temperature of 50° and the use of additional lighting from the seedling stage until plants are 20 to 24 inches tall. We recommend the use of 60 watt bulbs with reflectors spaced 5 ft. apart (the lighting arrangement as you have it set up for Mums will do nicely). Additional lighting must be given from September 1st to May 1st, or until the first flowers show color, and from sunset to 10:30 P.M. At other times the natural light is sufficient.

The Giant Incurred Aster has proven most popular for this purpose, with heavy demand for the White, Rose Pink and Shell Pink. Use sterilized soil and space plants 8 x 8 inches.

A portion of Ohio State's recommended growing schedule follows and is readily adaptable where the suggested 50° night temperature is maintained.

We find this schedule works out satisfactorily in most areas. However, there is apt to be more variation from year to year than with Mums.

Dwarf Asters in Pots

These new pot plant Asters should be given additional light from seedling stage until plants are 20 to 24 inches tall. We recommend using lights from sunset until 10:30 P.M. Use 60 watt bulbs with reflectors spaced 5 ft. apart, or use the lighting arrangement as set up for your Mum planting.

In keeping quality, both as a cutflower or pot plant, the Aster compares favorably with the Mum. Add to this a wide range of color, white to darkest red and deepest blue.

Sow seed in December and January for April and May flowering. Much in demand for Easter and Mother's Day.

Outdoor Aster Growing

The most widely advertised Wilt Resistant Aster will show no resistance to Wilt when grown in badly infected soil. We suggest a different location each year for your Aster planting, as well as steam sterilization of soil. Sow seed six weeks before planting out date and three weeks after seed sowing the seedlings should be put into Val-Peat Pots and three weeks later they will be ready for planting out. Space a foot apart in beds to insure a working area to set up wire or string supports. A cloth or plastic covering will provide protection against the leaf hopper which spreads Aster Yellows. An occasional spraying or dusting of your planting with Parathion should protect your Asters from infection. We recommend the use of Parathion only for those experienced with it. D.D.T., although not quite as effective, is recommended where safety is a factor.

All F-1 Hybrid Begonias from Seed

ANNUAL 30,000 seeds $\frac{1}{32}$ oz. 68° 2-3 weeks.

Adaptable to all growing conditions, Begonias have rapidly forged ahead as one of the most popular pot plants.

Improved strains and the introduction of F-1 Hybrids is playing a large part in keeping this versatile plant as one of the leaders, not only as a pot plant but in the garden border where it thrives in partially shaded areas.

Use them in combinations—keep a supply of Begonias in 4 or 5 inch pots. There is ready sale for this versatile plant.

Sow seed in a non-acid peat or light well drained material for best germination. Do not cover, except with paper, until seedlings sprout. Keep surface of flat uniformly moist. A minimum temperature of 60 degrees will insure best results and give nice pot plants for spring sale. Shade in the greenhouse in summer. December-January sowing will give nice 3 inch plants for May bedding sales and combinations. For Christmas and mid-winter pot sales sow in July.

For reasons of economy and as a space saver, shift seedlings to flats, spacing 2 x 2 inches, grow on until plants become crowded then transfer to 3 or 4 inch pots for ready sale.

CAUTION: Begonia seedlings will burn if exposed to full sun. Recommend using a good, well shaded house high in humidity.

Calceolaria

ANNUAL 20,000 seeds $\frac{1}{2}$ oz. 68° 2-3 weeks

In sowing Calceolaria seed, use only loose, sterilized material. Responds best when a night temperature of 60° is maintained. Seed being very fine does not require soil covering. During bud development period a temperature of not over 50° is recommended (Cornell University). When plants are of sufficient size to handle, put into small Val-Peat Pots, later shifting to 4 or 5 inch pots. A regular insect spraying program should be instituted and we recommend the use of Parathion. Calceolaria are most susceptible to aphids. Give some shade from late February on and water planting only when dry. Too much water causes yellowing of foliage.

Hybrids Mixed (F-1 Multiflora Nana. Gilbert's). Large flowerheads, good stems and a brilliant range of color which includes reds, yellows, bronze and pastels from solid to mottled. Good foliage and earliness of bloom as well as a compact flowerhead on not too large a plant combine to make this one of the most desired pot plant varieties. Originator's Trade pkt., \$3.50.

CELOSIA FIREGLOW

Cineraria

ANNUAL 6,000 seeds ¼ oz., 68° 2-3 weeks

A January sowing will provide nice 3 inch plants in May for combination work. For best results do not pinch.

CAUTION: Do not use soil in which Mums have been grown, particularly if your Mum planting was affected with Verticillium wilt or Seidewitz disease. Soil-borne fungus such as these will quickly attack your Cineraria causing the lower leaves to wilt and die and then gradually kill the entire plant. Steam sterilization of soil is important and as a prevention we recommend the use of new field soil from seed flats to finished pot.

Vaughan's Master Blend. A new strain in a complete range of solid colors, all without eyes, rich red tones predominating. Dense flower head, dwarf compact plant, 12 to 14 inches in height. 1/128 oz., \$1.85; ¼ oz., \$3.30; ½ oz., \$6.00; ¾ oz., \$10.80.

PINK BABY

IMPATIENS—For Pots and Shady Areas.

ANNUAL 65,000 seeds oz. 70-75° 3-4 weeks.

All too frequently the Impatiens is overlooked by the annual bedding plant grower. There is no finer annual for the shady location. Grown in full or partial shade, the dwarf varieties attain approximately the size of bedding Petunias. The plants are covered with bloom and the intense coloring is seldom equaled by other bedding plants.

For bedding purposes, use the dwarf strains which seem to retain their growth habit even in the late season. Temperature variation seems to have little effect on the Impatiens. Grow them from seed, they are free flowering and can be depended on to give satisfaction. Earliness makes the Impatiens readily adaptable to flat and Val-Pac growing. 2¼ to 3 inch plants for spring bedding sales are available from a January sowing, while dwarf varieties sown in August will produce excellent blooming pot plants in November and December.

Impatiens like heat and moisture, suggest 70° minimum for best germination results and keep moist. Full germination takes 3 to 4 weeks. Very sensitive to low temperatures, lack of moisture and darkness.

Annual Larkspur

ANNUAL 8,500 seeds oz. 54° 3-4 weeks

Larkspur does not germinate well in hot weather and we recommend chilling seed for several days in an ice box (45°-50°) if sowing must be made in summer heat.

For growing under glass to follow late Mums, we recommend a planting in late December to early January, and band or pot the seedlings. Plants are spaced 10 x 10 in. on raised benches and grown at 45°-50°.

Direct ground sowing will bring Larkspur into crop in early spring. From an August 15th to September 15th sowing, seedlings will be of sufficient size to winter over if given a light mulch. Another method is to sow seed in late October to November so it will not germinate until early the following spring. Care should be made to select a location with good drainage.

Extensive Larkspur trials over a period of years, under glass and outdoor cultivation, have caused us to revise our listing. We have included only those colors which have proven most satisfactory under varied growing conditions and at the same time are in popular demand.

All are the popular "Base Branching" type. Long spikes, closely set with full-double flowers. Upright growth, early, vigorous growers.

GLITTERING, GLAMOUROUS, PROFIT-BRINGING BEAUTIES

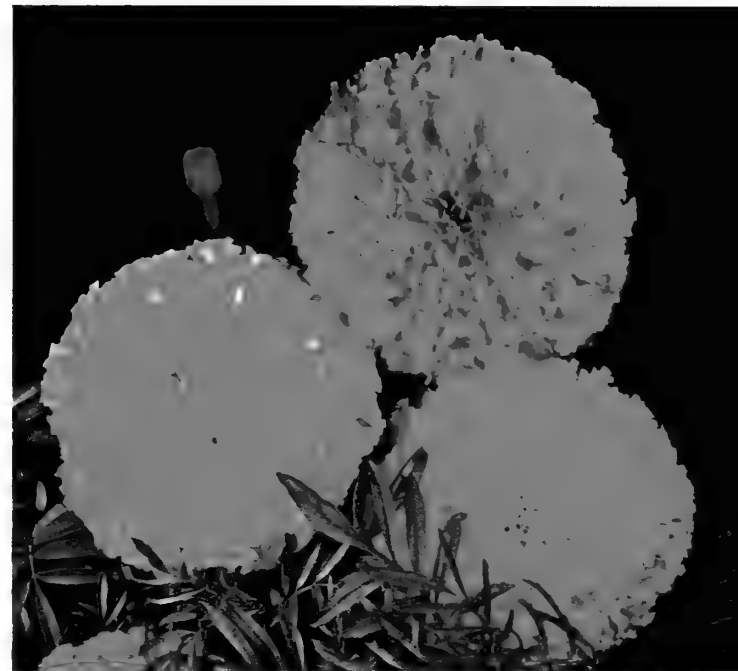

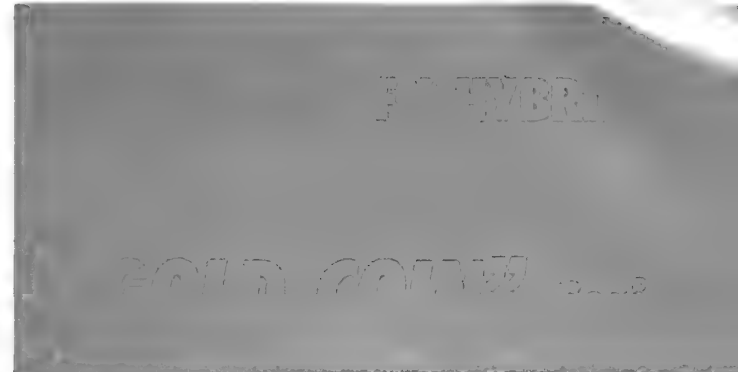

With the introduction of the new "Gold Coin" Series, a successful program for forcing has been established—one that insures blooming plants in pots for early Spring sales—approximately 6 weeks from sowing to selling.

We suggest seed be sown in mid-February in the greenhouse. Successive sowings may be made to insure marketable plants over a long period. Maintain a night temperature of 65 degrees fahrenheit. Immediately on emergence limit day length to 9 hours by the use of Chrysanthemum cloth. When two true leaves have formed, prick off into 3 inch peat pots and continue to limit day length to 9 hours for a total of 30 days. At this point cloth may be removed and plants marketed as soon as desired.

Close examination of the growing tips will reveal the tiny buds, even at this early stage. Development continues to normal bloom in the pot along with a corresponding increase in plant size.

These newest F-1 Hybrids are perfectly uniform, plants of a variety all respond at exactly the same rate, given equal growing conditions, making it possible to bring along marketable plants in weekly succession if so desired.

So well does the "Gold Coin" Series respond to these new forcing techniques, it is possible to sell budded or blooming plants early—from April 15 on—and assure customer of a spectacular display throughout the entire season—not restricted to blooming in late Summer or early Fall.

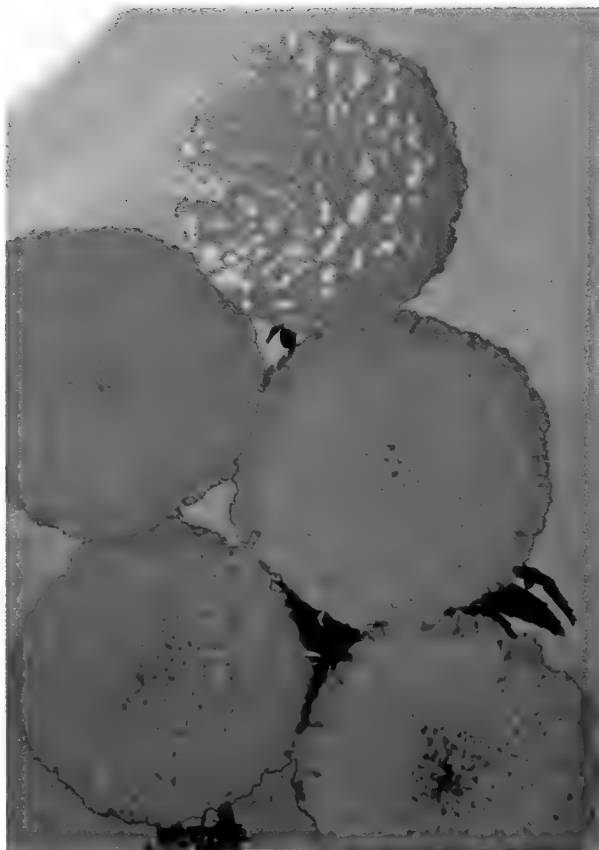

MARIGOLD "GOLD COIN" SERIES

Pansies For Bedding

VAL 24,000 seeds oz. 55-90° 2-3 weeks.

Pansies now vie with Petunias in importance as spring bedding plants. This popularity is due to improvements in strains in recent years, and newer methods of culture. The home gardener likes the Pansy—have plenty for early spring sales. Basically there are two methods of culture, either will assure your having strong healthy plants in bloom early.

Mid-winter sowing, late November through January. When seedlings are of a size to handle, transplant to small flats or "paks" and grow on cool, 50 degrees, and be assured of blooming plants for earliest sales. Six blooming pansy plants in a Vaughan Val-Pac container is something the home gardener will find hard to resist.

Summer sowing, early August, has for many years been the accepted time to start pansies. Spaced 4 x 6 inches in a cold frame, given winter protection, loose straw, perhaps, plants will be well established before winter sets in. Here again blooming plants are available early in Spring.

Double Petunias For Pots—Bedding—Combinations

Sow "Doubles" earlier than ordinary strains to have for sale at the same time. For "flat" or "pak" sales, allow 12 to 15 weeks from sowing to sale date—depending on your market needs. In Chicago, sow no later than December 15 for 3 inch for May combinations. January 1 sowing, grown cool, 50°, will insure strong 3 inch for late May. Well shaped plants with several blooms in 4 to 5 inch for April and May pot plants, or 3 inch for March, result from seed sowing not later than November 15.

Like all other Petunias—"Doubles" need good drainage and cool temperatures. Dwarf habit of growth is lost if grown too high. 55° is ideal.

All the Double Grandifloras break readily but Sonata and Minuet respond best to one pinch. The "Double Multifloras" too, respond to a single pinch.

"Double Petunias" are one of the most popular and versatile of Spring bedding plants. Their wide range of color, flower size and plant habit makes it important that you have available a well rounded selection. Our "Instant Glamour" Petunia listing includes the finest and most popular sorts.

There is ready sale in "paks" or "flats"—6 or 12 plants to the "pak" is much in demand.

As a "Come-on" for the early shopper in March and April, offer 3 inch blooming pots. Resulting sales will surprise and please.

"Doubles" in 2¼ to 3 inch Val-Peat Pots find ready sale. An open flower or a bud showing color is your best sales aid. The quality of the peat pot grown Petunia is outstanding and is sure to bring back the ever satisfied customer.

Three and four inch pots of "Doubles" are ideal for May combinations.

Heavy three to five inch pots are in demand for Mother's Day.

Although Sonata is a great favorite at this time, don't overlook the free flowering "Double Multifloras."

Our "Double Petunia" strains are the finest obtainable. Vaughan's greenhouse checks supply needed information on inside growing and plant habit. Our Field Trials at Cantigny, near Wheaton, Illinois, show reaction under outside Summer conditions. Why not visit these Trials—they are at their best from mid-July to end of August?

All F-1 Hybrid and All Double Petunias now supplied in **V-seal** packages.

What does this mean? What protection does it give you, the grower? Why is Vaughan's offering you this new packaging process?

V-seal packages are your assurance of better seeds. The seed to be packaged in V-seal must be dried very carefully after harvest, utilizing the most modern scientific methods. This eliminates chances taken under old methods of curing seeds and reduces the chance of seed-borne diseases and insect infestation, and also reduces injury with resulting loss of seedling vigor.

V-seal packages are your assurance of higher germination. V-seal packaged seed is dried as described above, then stored in moisture-proof bulk containers under continuing ideal conditions until germination tests have been completed.

V-seal is your assurance that the seed will store longer. It is packaged in various size units in a room held under rigid control at very low humidity and uniform temperature. Once heat-sealed the **V-seal** pouch maintains the low relative humidity like a time capsule, regardless of surrounding conditions. This sealed-in climate travels with the seed and aging is retarded.

PETUNIA
PINK SATIN

The F-1 Hybrid Multifloras

ANNUAL 280,000 seeds oz. 68° 1-2 weeks

Only in size of flower does the F-1 Hybrid Multiflora Petunia differ from her F-1 Hybrid Grandiflora sister. Medium sized blooms are produced in great profusion and literally cover the entire plant. Brilliant color tones, earliness, freedom of bloom over a long season, as well as compact plant habit make the F-1 Hybrid Multiflora particularly adaptable to bedding plant sales.

Use them in combinations where their brilliant color tones will stand out. For "mass effect" or use in the border, they are unexcelled.

Don't overlook potting a few in 3's for the late June buyer.

Increase your bedding plant sales with the F-1 Hybrid Multiflora Petunias. Have them available in good quantity. We offer only varieties that have proven by actual test their ability to withstand the most trying conditions.

Instant Glamour everywhere you go!

Mr. Botacchi is well qualified for this position. He holds a Bachelor Degree in Floriculture from the University of Massachusetts, and a Masters Degree in Horticulture from Penn State. For the past five years he has been in charge of our Research and Experimental Division at Cantigny Farm, Wheaton, Illinois.

Address your inquiry directly to him at O S 742 Forest Street, Winfield, Illinois, or make known your needs through your Vaughan salesman. Supply the following pertinent facts to assist in making up the schedule.

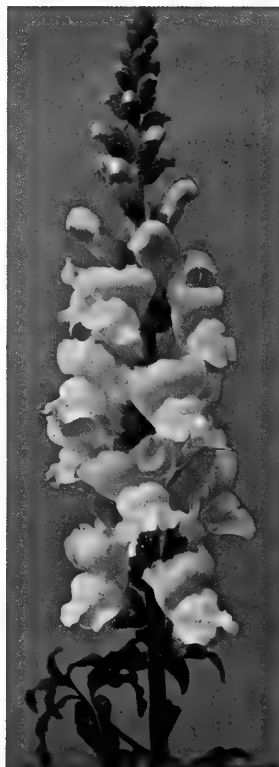

1. Geographical location of greenhouse
2. Size of benches length and width inside No
3. Date each bench is available and for how long
4. Raised or ground benches

VERBENA DWARF MASTER BLEND

VERBENA DWARF DELIGHT

Verbenas . . . For Combinations . . . For Bedding

ANNUAL 10,000 seeds oz.
68-86° 3-4 weeks.

Verbenas are among the most popular of the native American flowers. Color range and plant habit make them adaptable for all uses and locations.

The dwarf forms should be spaced about 6 inches while the spreading types require from 12 to 16 inches. Germination is slow and uneven—50 to 55% being considered an excellent stand. To hasten germination grow in soil at 65 degrees. When established a night temperature of 50 degrees is best. Pinch early to avoid straggly growth.

Good 3 to 4 inch pot plants are available for Spring sales from a February sowing. Mid-March sowing is recommended for Pak sales.

By nature the Verbena has divided itself into two classes—the spreading type which provides a carpet-like growth covering a wide area and the upright type which is bushy and branching but upright in growth rather than spreading. We have divided our listing showing the two distinct types.

Dwarf Master Verbenas

The finest Verbena for spring bedding plants and combinations. Very compact and dwarf, coming into flower when plants are small and blooming through the entire season. Excellent bright colors, many with eyes. Because of their early blooming quality can be had in flower for Spring sales, in flats or Val-Pacs.®

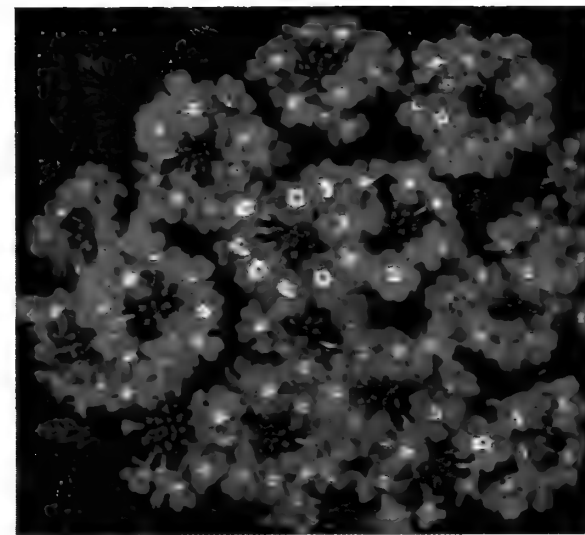

Dwarf Master Blend.® Hundreds of gay color combinations, many with eyes. Ideally suited to pot and flat culture, wonderful as a garden variety. A brilliant range of color.

ZINNIA PINK BUTTONS

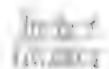

ZINNIA RED BUTTONS

Two New "Button" Zinnias For 1964

ANNUAL 2,500 to 4,000 seeds oz. 68-86° 1-2 weeks.

The Plant of the "Button" Zinnia is unique in that it is but 1 ft. tall, distinctly more compact than any other type (excepting Thumbelina) and is only half the height of the popular Lilliputs.

The Cupid-like full double blooms measure but 1½ inches across. The colors are bright and clear with a uniformity of coloring that is outstanding.

Pink Buttons. All America Bronze Medal 1964. A delightful shade of salmon pink. This attractive free-flowering "Button" caused much comment in our trials and showed resistance to adverse weather conditions wherever grown.

Red Buttons. The vivid scarlet-red counterpart of Pink Buttons. Only in color does it differ. Very free flowering, full double blooms with the same uniformity of coloring. A bright attractive color.

Zinnias . . . always popular for bedding and cutting

A border planting of MARIGOLD CLIMAX and ZINNIA OLD MEXICO

ZINNIA
FIRECRACKER

ANNUAL 2,500 to 4,000 seeds oz. 68-86° 1-2 weeks.

An easily grown annual that responds quickly when soil and atmospheric conditions are right. Wide variation in flower size, type and height has increased the interest in the Zinnia. It is now much used for cutting, because of its long lasting qualities, and makes an excellent background subject and dwarf sorts are also used in the garden border.

More and more the home gardener is depending on the

grower for his plants, preferring to buy them rather than make his own seed sowing. To insure a good supply of plants, we suggest seed be sown about 30 days before the start of your bedding plant selling season.

Zinnia seed may also be sown inside in February and March for inside cutting. Sown in April plants will bloom from May 20 to June 20 and from a May sowing cutting material will be ready from June 10 to 20.

Thumbelina. The ideal edging and border Zinnia. Extremely dwarf, compact plants that seem to thrive on close crowding. Plants spaced 2 or 3 inches apart in rows 6 inches apart soon appear as solid ribbons of color. Miniature double and semi-double blooms are freely produced. The colors bright and cheerful. Thumbelina is in bloom from earliest Summer to late Fall, does not lose its dwarf compact habit despite a constant increase in flowers. All America Gold Medal 1963. $\frac{1}{32}$ oz., **85c**; $\frac{1}{16}$ oz., **\$1.50**; $\frac{1}{8}$ oz., **\$2.75**; $\frac{1}{4}$ oz., **\$5.00**; $\frac{1}{2}$ oz., **\$9.00**; oz., **\$15.00**; 4 oz., **\$45.00**.

Bonanza (F-1 Hybrid). Only in color does Bonanza differ from the new popular Firecracker. Rich golden yellow bloom, long cutting stems and long quilled petals add to flower interest. All America Silver Medal 1964.

Firecracker. (F-1 Hybrid). Flowers are full-double and a clear red with scarlet undertones. Vigorous 30 inch plants show great resistance to mildew. Long strong stems, informal quilled petals. All America Silver Medal for 1963.

Vaughan's Selected Vegetable Seeds

Whether it's Lima Beans (the largest sized seed we offer) or Tobacco (the smallest sized seed we offer) there's Vaughan's 88 years of knowhow that assures you of trueness to variety and excellence of quality.

Every lot of seed we offer for sale has been tested for germination in our laboratory just prior to shipment. Every variety we offer has been or will be grown in our field trials. Our seed growers operate in the localities most favorable for disease free and problem free seed crops. All of these factors enable us to assure you that you are obtaining the very best seed when you buy from Vaughan's

YOLO WONDER PEPPER

In our opinion the best open pollinated California Wonder type pepper. It is a dependable cropper widely adapted and has excellent fruit characteristics. We recommend it highly for market, for shipping, for bedding plant sales and home garden.

The glossy dark green fruit are mostly 4 lobed, 4—4½ inches long and 3½—4 inches in diameter and very thick meated. An outstanding variety combining mosaic resistance and vigorous plant growth with superior quality.

½ oz., 60c; oz., \$1.10; ¼ lb., \$3.35; 1 lb., \$10.00.

EARLY GIANT HYBRID TOMATO

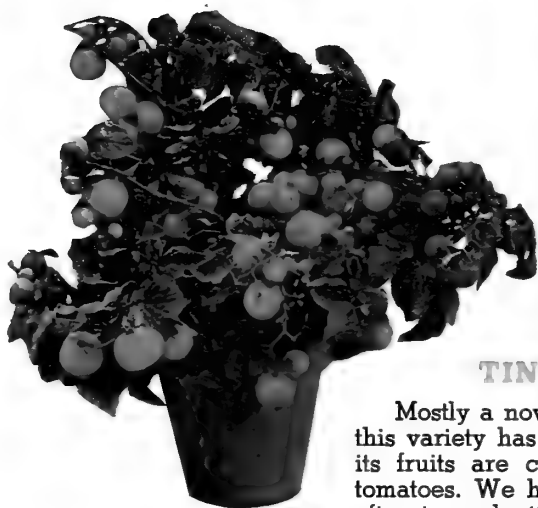

This true F-1 hybrid is the largest fruited, best tasting, heaviest yielding, finest looking early to midseason variety we have ever grown in our trials. Only hybrid techniques could possibly combine these qualities and in our opinion it excels all standard varieties.

Whether for market garden or home garden, for staking or ground culture, Early Giant Hybrid is a heavy yielder of 12-14 ounce flattened globe shaped fruits, with solid meaty interiors, red throughout. Order early—its difficult to keep our production equal to the increasing demand.

1/16 oz., \$2.50; 1/8 oz., \$4.50; 1/4 oz., \$8.50; 1/2 oz., \$16.00; 1 oz., \$30.00; 1/4 lb., \$90.00.

 Bedding Plant Growers**

TINY TIM TOMATO

Mostly a novelty for bedding plant growers this variety has become very popular because its fruits are comparable to "cocktail sized" tomatoes. We have picked ripe fruits 40 days after transplanting into our trial gardens—by far (by 3 weeks) the earliest variety we've grown.

The full grown plants are never over 12 inches tall and do not have a diameter spread of over 12 inches. They can be grown in window boxes and are usually loaded with very bright red fruits which results in their being quite a decorative window box item.

The round fruits are approximately 1 inch in diameter bright red inside and out, and very flavorful. Seed supplies have been very limited the last few years so we don't know the full potential sales of this fine novelty.

$\frac{1}{4}$ oz., **95c**; $\frac{1}{2}$ oz., **\$1.75**; oz., **\$3.35**; $\frac{1}{4}$ lb., **\$10.00**.

VAUGHAN'S HYBRID PEPPER

The lack of a suitable method of cross pollination has delayed the development of hybrid pepper varieties. We have been fortunate in finding two compatible inbreds whose progeny is vigorous, productive and dependable.

Fruits of this true F-1 hybrid are the largest, thickest meated, most attractive dark green of any variety we've ever seen. The big heavy peppers are 5—5½ inches long 4—4½ inches in diameter very glossy, and except for being so much larger resemble California Wonder.

It matures a few days later than California Wonder and therefore should be planted in peat pots. Vaughan's Hybrid may well have a place on many markets and we suggest at least a trial planting. $\frac{1}{16}$ oz., **\$1.50**; $\frac{1}{8}$ oz., **\$2.50**; $\frac{1}{4}$ oz., **\$4.75**; $\frac{1}{2}$ oz., **\$9.00**; oz., **\$17.50**; $\frac{1}{4}$ lb., **\$52.50**.

BURPEES BIG BOY HYBRID TOMATO

Another very large fruited variety, a result of hybrid techniques, but considerably later than Early Giant Hybrid which has the same sized fruits. In areas north of Chicago so few fruits ripen on Burpees Big Boy that it is usually a disappointment. Further south Big Boy will out yield Early Giant Hybrid and has more vigorous vine growth.

In addition to being large the fruits are well colored, meaty and of high quality. The name in itself makes it a popular bedding plant item.

Hybrid tomato plants grown and sold in peat pots are very profitable. Selling any variety of tomato plants in peat pots leads to your customers satisfaction. Roots grow right through the walls; and, unless completely dried out before your customer plants pot and all, they start growing as though they'd never been transplanted.

NOW! Master Blend® Merion Formula

THE TOPS OF ALL LAWN GRASS MIXTURES

The popularity of Master Blend® Lawns in the northern part of America has reached an all-time high. Homeowners and turf experts alike attest to its all-around superiority. And here's why they swear by it:

Using over 50% Merion Blue Grass as a base, Vaughan's has developed a mixture which germinates quickly, maintains an excellent color all year round and grows in sun, or light shade and in any soil: rich, sandy or clay. Vaughan's has done this by blending the best of the latest grasses developed by turf breeders:

Delta Kentucky Blue Grass discovered in Canada. Adds quick germination to Master Blend.

Pennlawn Red Fescue, a variety ideal for shade, quick germination and sandy soil.

Newport Kentucky Blue Grass germinates quickly, blends well with Merion and maintains excellent fall color.

This blend formulated by Vaughan's, the introducers of Merion, is designed to make it possible for the average home-

owner to grow America's finest lawn with ease. All of Vaughan's tests have shown that this new blend produces a lawn faster, with less work and with more complete satisfaction than was possible with Merion alone. This conclusion has been reinforced by leading universities.

That's why Vaughan's unhesitatingly recommend Master Blend Merion Formula for your customers. Considering the work, cost of other materials and time involved in making a new lawn or re-seeding, the greatest economy a homeowner can make is to use the best seed available. All-perennial Master Blend® fills this bill. Unlike cheap mixtures which never really look right and which need re-seeding each year, this blend improves in appearance each year, adding beauty and value to the home.

And, amazingly, one pound of Master Blend® covering about 750 sq. ft. goes as far as 2 to 3 lbs. of the best Kentucky blue grass. So there is actually an initial saving, too.

MASTER BLEND® MERION FORMULA

Contains over 1,250,000 seeds of pure Merion strain of Kentucky Blue Grass plus Pennlawn Creeping Red Fescue, Delta Ky. Blue Grass and Newport Ky. Blue Grass. Our seed does not contain any Poa Annua or Bent.

Fastest Turnover—These roses—actually growing—are terrific "Impulse Sale" items.

Easiest to Plant—Just drop 'em in a hole, instant planter-container and all, and watch these roses grow! Just display them and watch these roses go!

Best Profits! Full 40% from beginning of season to end. No late-season mark downs, no dead-bush inventory losses.

Make Dazzling Displays—Pre-planted and growing in attractive, colorful containers with full-color pictures of varieties, Vaughan's "Instant Glamour" Roses catch every eye.

Longest Shelf Life—Sprouting adds to the sales appeal of these roses instead of sapping their strength. The longer they're on display, the better they look. Stimulant in soil mixture lasts through first bloom.

Potted in Plantable Containers

Customers just snap out plastic top and bottom, place the rose, still in the container, in a hole. Roots grow out bottom, container disintegrates in soil. Complete planting instructions are on every label.

Customer Satisfaction Guaranteed—

Instant Glamour Roses are growing already so there's no worry about survival. Planting them, container and all, prevents transplant shock.

Priced to Sell Our suggested retail is only 25¢ per plant more than for patented packaged roses. For example we suggest a retail price of \$3.25 for Arlene Francis, \$2.75 for New Yorker and \$1.79 for all non-patented varieties. You are allowed a full 40% discount from these suggested retail prices.

Packing—There are 12 Instant Glamour Roses in each carton. Minimum shipment is 5 cartons.

Shipping—Freight prepayment or allowance is made on orders for Instant Glamour Roses amounting to \$100.00 or more within 100 miles of our nearest warehouse and to further points at the rate of \$1.00 worth of merchandise per mile. This does not apply to bare root roses.

Roses as far as you can see—Looking across our Arizona Production—The bouquet is Montezuma.

Vaughan's "Extra Value"

Arizona Grown Rose Bushes

There's no better way to build business than to offer your customers **EXTRA VALUE**. And that's exactly what you can do with Vaughan's Arizona-Grown Roses. The unretouched photo below shows the superior quality of a Vaughan's Grade #1 rose compared with a rose meeting Grade #1 specifications. Vaughan's Grade #1 roses actually match Jumbo Grade (extra large Grade #1).

BEAT COMPETITION SELL THE BEST

Why Vaughan's Arizona Grown Roses Are Superior

● GROW BETTER AND FASTER.

Arizona growing conditions result in 3% to 5% more starch content than is found in California-grown roses and 10% to 15% more than in those from other areas. Iowa State and Penn State University tests show that the more starch, the better and faster the first-season growth after transplanting. Result: greater customer satisfaction, less complaints.

● FREE FROM DISEASE.

Vaughan's roses have no Black Spot, Anthracnose Mildew and scale. These organisms cannot exist in Vaughan's Arizona growing areas.

● YOU GET THE VARIETIES YOU ORDER.

Just about 100% of the roses we bud in Arizona grow into good saleable plants. This compares with only 80% to 85% growers get in other areas. Therefore we know we'll have the varieties and quantities you order.

● SUPERIOR FOR POTTING.

The Dr. Huey root stocks result in shorter shanks and dense, compact roots which pot and package better. (See picture showing downward growth.) These roots have superior stored energy resulting in quick healthy growth after transplanting.

● HARDY EVERYWHERE.

The root stock is adaptable in all climates from Canada to Central America. Actually hardiness and hardness are synonymous insofar as winter survival of roses is concerned, and is controlled to a great extent by late summer growth of the plant. It is true that hardiness is inherent in some varieties, but it is because these varieties inherit growth characteristics that result in the wood becoming hard or mature in the early fall regardless of weather or culture.

● PROVEN BEST BY TEST.

Every variety has been grown for at least 2 and many up to 10 years in Vaughan's Trials.

Vaughan's Pot Forcing Roses — ARIZONA GROWN

You can recapture potted plant sales from supermarkets by offering these exceptionally fine roses potted and in full bloom for Easter and Mother's Day. Their popularity is increasing all the time. Recommended varieties make wonderfully-free-blooming specimens. XXX grade result in large plants; XX grade in medium plants. Shipments from December through February.

Patented varieties are offered under license from the patentee and are for resale at or above the retail prices specified. Wholesale prices on patented varieties are per variety. Quantities of patented varieties cannot be grouped with standard varieties for quantity prices. All standard varieties may be grouped to take advantage of the lowest quantity price.

Suggestions for Forcing Pot Roses for Easter and Mother's Day

These suggestions are based on information supplied by customers who have successfully grown pot roses for several years. Proper allowance must be made for any unusual conditions in your area.

When to Pot—Planting for Easter should be done 3 months before the holiday occurs. We time our shipments so you receive the bushes 2-3 days before planting time.

Pruning—At time of potting prune tops to 6 inches above bud union. Prune roots to fit the pot leaving as many fibrous roots as possible.

Soil—Any good greenhouse soil is satisfactory. Be sure to tamp the soil well around the roots and water thoroughly. Some growers use a tamping stick to pot tight.

Temperatures—Immediately after potting 50° and high humidity. Some growers use wet burlap over the plants until they sprout. After sprouting, transfer to a sunny bench and use 58° temperature. 62° will advance the flowering. 55° will retard the flowering. Temperatures above 58° results in a loss of quality.

Pinching—Advisability of pinching varies. Some growers insisting it results in a better pot plant, others insisting it does more harm than good. In the Chicago area a soft pinch 8 weeks before Easter results in flowers at Easter at 58°. A pinch 7 weeks before Mother's Day is proper timing.

Watering and Feeding—After the shoots are well started, soil should be kept as evenly moist as possible. Feeding with soluble fertilizer, like Vaughan's Instant Glamour, should be done about three times during the plants growth. The first application about six weeks after potting.

GLOXINIA PLANTS—FOB FLORIDA

FORMULA MIXTURE: This is a well balanced mixture of the best commercial types made up from separate colors. Formula varies slightly with the season, as some varieties are better at one season than at others.

Mixture is approximately as follows:

60% Solid Red Types	10% Purple and White Combinations
10% Solid Blue-Purple Types	5% Solid White
15% Red and White Combinations	

These varieties will mature in 90 to 120 days depending on climate. These seedlings are not to be compared to the common 5 petal varieties such as those from Belgium sources. All strains have flowers of 6 to 8 petals.

INDIVIDUAL COLORS

IMPROVED RED VELVET: Our finest red. Very strong producer of large ruffled cardinal red flowers. Well grown plants of this variety regularly produce 50 to 75 bloom in 5" or 6" pots.

ROYAL VELVET: Very heavy producer of velvety deep purple flowers. Strong growth habit.

NEW CHERRY BELLE: An improved strain that produces up to 100 blooms per plant. Deep cherry red flowers with border. Very showy and large plants.

PINK PEARL: A new strain with soft rose-red petals around a radiating white center. Produced by inbreeding our older but dependable red and white velvet.

SNOW BIRD: Gigantic pure white flowers of extreme beauty. Strong growing plants with beautiful foliage. Long lasting flowers that open under adverse conditions.

PURPLE CLOUD: Choice plants full of rich purple bloom that have a white center radiating out into the petals to make a pleasing effect.

IMPROVED COLOSSAL HYBRIDS: Super size flowers varying in color from soft rosy pink to red or wine color on beautiful soft foliage—fast maturing plants that hold their blossoms high and erect.

PURPLE BELLE: Deep purple flowers with good white border. A new strain not at all like the old Emperor Wilhelm. Heavy plants with lots of buds.

POINSETTIA STOCK PLANTS

BARBARA ECKE SUPREME. Pat. No. 1055. Patented variety sold only under patent restrictions. The finest of all pot-plant varieties for the central and northern part of the United States and still the leader.

ECKE PINK. Blooming and growth habits same as regular Pink but having long bracts similar to the Oak Leaf type, which makes it very desirable.

INDIANAPOLIS RED. Exceptionally fine variety for the southern states. Grows short and stocky.

NEW ECKE WHITE (Pat. No. 1802) Very wide bracts; other features same as Ecke White.

ELISABETH ECKE (Pat.)—known as #3—this new introduction is a naturally low grower, has wide leaves and bracts, good red color, a small tight center; it is naturally later blooming than Barbara Ecke Supreme, makes perfect bracts on late cuttings, pinches very well; bracts do not droop or curl when mature; it is not a fast rooter. Field-grown plants will be available for 1964 at \$200.00 per 100 "field-run".

Modern selling calls for modern containers. More of your customers each year are willing to pay for better, more mature plants in pots. PLANCO Pot Trays hold either Peat Pots or Bagasse Pots. Using individual pots in trays is more economical. Should you lose one plant, you do not have to throw away the entire pak. Replace one plant and you still have a saleable pak.

PLANCO—POT TRAYS

**THE MODERN PROFITABLE WAY
TO SELL PLANTS IN PEAT POTS**

Some growers have standardized their growing operation by using these trays both with and without pots. Try some this season. Your customers will be more satisfied with the quality of these individual pot plants in paks.

Planco Bagasse Pots

The newest in transplantable pots

Planco Bagasse Pots almost totally disintegrate in just one month after transplanting.

WHAT IS A BAGASSE POT

The bagasse pot is made from the residue of manufacturing sugar from sugar cane. Bagasse is the fiber and pith from the cane. The bagasse is processed and divided into two parts—fiber and pith. They are then reunited in proper proportion to make the pots. The fiber holds the pot together and the pith fills in the spaces between the fibers.

WHY A BAGASSE POT

Bagasse fibers are longer and larger in diameter than wood fibers, the binding agent in peat pots. These fibers make a bagasse pot stronger when either wet or dry. Since bagasse is manufactured, the pots are more uniform. Both the fiber and the pith will disintegrate, unlike peat pots. This disintegration allows the plant to develop its entire root system once transplanted into the soil. Disintegration will not take place above ground.

SHOULD I USE BAGASSE POTS

If you want total pot disintegration—YES! Bagasse Pots will hold up about 3-to-4 months above ground. For short term crops, you should use Bagasse Pots. For long term crops, we suggest you use Planco Val-Peat Pots. Planco Bagasse Pots are manufactured under the same high Quality Control procedures as are the Peat Pots. They are made in Louisiana where Sugar Cane is grown extensively. Try Planco Bagasse Pots this year—you will be glad you did.

Planco Bagasse Pots

The Modern Organic
Transplanter Pots

SUPERIOR BECAUSE OF THESE FEATURES

● Better Moisture Control

Because bagasse fibers are larger and stronger than fibers in other organic materials the wall structure of Planco Pots is more porous than any other organic transplanter. This porous quality allows almost **twice as much** moisture movement while on the bench or after transplanting. Water and water borne nutrients quickly absorb into and penetrate the pot walls while excessive water is free to drain off. The results are that Planco Pots require less water, less labor and produce faster growing plants.

● Better Root Aeration

Good root aeration is an essential ingredient and is as vital to any plant's growth as nutrients and water. The same porous quality of molded bagasse fibers also accounts for the superior root aeration provided by Planco Pots.

● Easier Root Penetration

Because of their smaller fiber structure and the physical changes that take place during processing other organic transplanters sometimes tend to "case-off" by forming a glaze around the outer walls. This seals off the pores of the pot thereby inhibiting moisture transfer, root aeration and the growth of feeder roots of the more fibrous rooted plants.

Quality control of the bagasse fibers insures Planco Pots against "case-off." Complete porosity allows even the finest of hair roots to penetrate the pot walls and to develop a healthy root structure for maximum plant growth.

● Added Strength for Handling

Although Planco Pots absorb moisture faster than other organic transplanter pots their sturdy structure provides added strength for handling—even when wet. The danger of crumbling and tipping is always at a minimum whether in use or in shipping.

● Better Disintegration

Planco Pots disintegrate. The pot remains intact while it is above ground. Once it's planted in the ground it disintegrates, you can't even find the pot one month later.

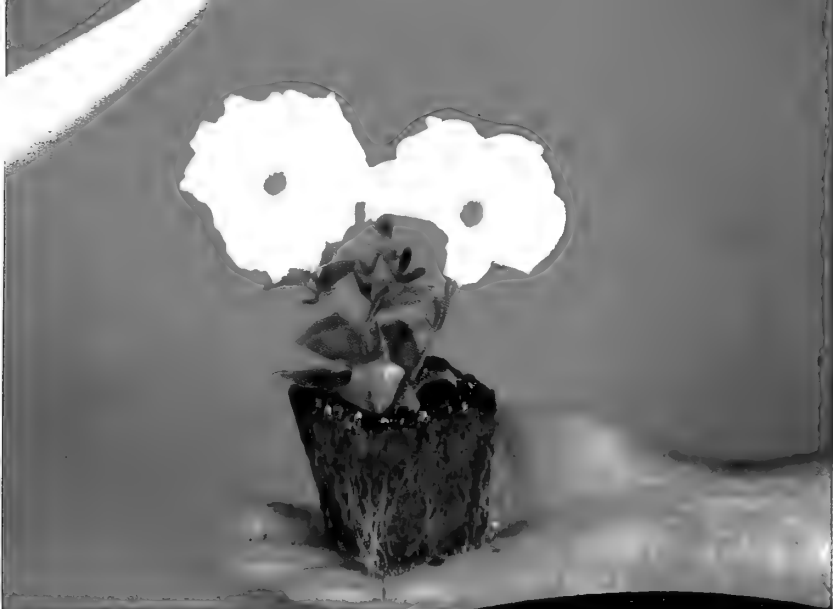

Sold in original cases only.

Money — Saving MULTIPOTS

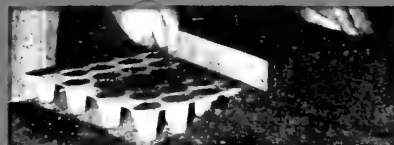

Produce Better Plants at Lower Cost
Save Labor, Save Soil, Save Space

The Secret of Multipot . . . It's a flexible plastic tray with molded-in, pot-shaped depressions. Plastic is extra smooth for easy plant removal and is water and air-tight to prevent the evaporative cooling of plant roots which can stunt growth. Drain hole in base of each pot. Trays are all 12x22 inches in size and are available with choice of pot sizes from 1 1/4 inches to 2 3/4 inches. There are 24 to 100 pots per sheet depending on size of pot. Multipots are completely durable. Use them over and over again; they should last 3 or more years in average service. Unharmful by chemical sterilization.

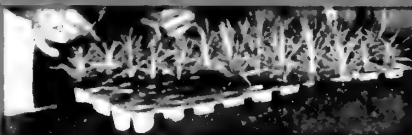

EASIER TO USE . . .

Simply heap on soil, then . . .

Level off soil with board and . . .

Plant individual cuttings.
And that's all you do.

ELECTRONIC SEALING

Vinyl is calendered in widths up to 6 ft. Wider covers are fabricated by electronically sealing stock width panels together. (Example: two 4½ ft. panels are sealed together to make a cover 9 ft. wide.) Covers may be ordered in any combination of stock widths, as shown above, in any length.

Note: In ordering steam sterilization covers allow 10% in length for shrinkage and contour of the ground. If maximum light transmission is not necessary, electronic sealed covers of weatherable vinyl should be ordered in the diffused lite film—it is easier to fold. The polished surface of the clear film causes it to block.

Because of postal regulations, quart cans of adhesive and thinner must be shipped by Railway Express or Motor Truck.

A S-B-Nine GROWTH RETARDANTS

A solution of B-Nine is sprayed on the leaves of potted chrysanthemums. B-Nine passes into the leaf then moves within the plant to reduce elongation of the stem. Treated plants develop a shorter, more compact habit of growth when compared to untreated.

Add one-half pint B-Nine solution to 2 gallons of water and spray to drip point as late as four to five weeks after the start of short days when side flower buds are removed. The chemical will retard stretching of the stem just below the flower.

GENERAL ELECTRIC SOIL HEATING SETS, CABLES AND CONTROLS

A General Electric heating cable set, buried in the soil, keeps the soil at the ideal temperature for germination and the early growth stages. Resulting plants can be set out far earlier, and are more quickly ready for market.

In greenhouses, G-E heating cable sets are often used for supplementary heating. By maintaining the soil temperature 15° to 20° F. above the air temperature in the greenhouse, they provide ideal growing conditions with reduced load on the general heating system.

As a result of many years of continuous clonal and mother-block selecting and growing procedures followed by Vaughan's, "Master Select" Lilies are years ahead of others offered. They are known for more vigor, more flowers and more uniformity.

● CAREFUL CHOICE OF BULB PRODUCERS.

Vaughan's producers have outstanding ability. They follow the expensive "Master Select" clone and mother-block program.

● NEVER-ENDING RESEARCH PROGRAM.

Vaughan's pioneered research that evolved into most of the accepted forcing practices in use today: Vaughan-financed research goes on continuously at many universities and in independent greenhouse trials.

And here's proof that Vaughan's "Master Select" bulbs are favored by America's Easter Lily growers: Sales of "Master Select" bulbs have increased over 300% in just a few years. Profit-minded growers know quality pays!

FACTS ABOUT VAUGHAN'S LILY VARIETIES...

ACE: A Vaughan introduction and today's top variety. Vaughan's "Master Select" Ace is free-blooming with dark green, compact foliage and selected high disease-resistance. Forces in 120 to 122 days at 60 degrees.

CROFT: The original West Coast Lily with large blooms. Still a favorite of growers able to provide proper culture. 110 to 115 days forcing time at 60 degrees.

KING: A West Coast grown free-blooming Vaughan's exclusive. This Master Selection Georgia-type lily is noted for vigor and disease-resistance. Usually somewhat taller than Croft or Ace. Forces in about 100 to 115 days at 60 degrees. Also a fine garden lily. The most reliable producer, even under difficult conditions.

NELLIE WHITE: A variety introduced by Vaughan's almost ten years ago, again gaining some popularity. 110 to 115 days forcing at 60 degrees. Somewhat shorter foliage and smaller flowers than Croft with about the same bud count. Height is variable. Packed same as Ace lilies.

#44: A new lily under the Vaughan's "Master Select" program. Under limited production until it has been thoroughly proven under all commercial conditions. Forcing time about 115 days. Height and bud count like Croft. Worth a try by all growers. #44 produces a very sturdy plant with flowers of good lasting quality. Packed same as Croft lilies.
